

Task / Feature	Description (optional)	Product			Architect			Smart Contract Dev		
		Low-case, h	High-case, h	Recommended	Low-case, h	High-case, h	Recommended	Low-case, h	High-case, h	Recommended
Totals:	Current Soneium blockchain module scope	42	108	65	86	188	124	93	191	133
Application										
0. DISCOVERY & SCOPE				0			0			0
Kickoff, access & technical alignment	Repos, Soneium/Minato access, CopySight API access, Telegram engineering channel	2	5		2	5		1	3	
Freeze MVP scope & acceptance criteria	Images first; Proof of Creation + RISKY/NOT_RISKY gate + Soneium provenance reference	3	7	5	3	6	4	1	3	2
Soneium / CopySight dependency & responsibility mapping	Define ownership across CopySight, Soneium and integrating apps	2	5	3	3	7	5	1	3	2
Current vs future scope boundary	Licensing and royalty distribution retained as future direction, excluded from current build	2	5	3	1	3	2	0	2	1
Technical coordination model & decision log	Architecture decisions, open dependencies and Soneium-team confirmations	3	6	4	2	5	3	0	2	1
1. PRODUCT & INTEGRATION DEFINITION				0			0			0
Generic Soneium app consumer model	Reusable module/API for native Soneium apps and third-party applications	3	6	4	2	5	3	0	2	1
Proof of Creation product flow	Creator wallet → CopySight check → immutable provenance record → reference returned	3	6	4	2	5	3	0	2	1
IP Validation gate	CopySight returns RISKY / NOT_RISKY; risky assets are blocked and warned	3	6	4	2	5	3	0	2	1
Wallet connection & user transaction model	EVM wallet required; WalletConnect-compatible approach; user pays deployment transaction gas	2	5	3	2	5	3	0	2	1
On-chain record policy	Store every CopySight check tied to an on-chain asset and future rights-transfer events	2	5	3	3	6	4	0	2	1
2. ARCHITECTURE & SECURITY DESIGN				0			0			0
End-to-end architecture + on/off-chain boundaries	CopySight validation stays off-chain; Soneium stores immutable references and attestations	1	3	2	6	11	8	2	5	3
Creation + validation attestation data model	Define fields, identifiers, references and retrieval model	1	3	2	5	10	7	2	5	3
Attestation lifecycle & extensibility	Support new/superseding attestations and future validation/rights-transfer records	1	3	2	4	8	6	2	5	3
Hashing, canonicalization & public-data rules	Deterministic asset/report hashes; leave visibility policy configurable	0	2	1	4	8	6	3	6	4
Trust, signer, RPC & scalability architecture	CopySight as current authorized attester; key controls; provider strategy; scalable well below 5% of Soneium TPS initially	0	2	1	7	14	10	3	6	4
3. SONEIUM ONCHAIN MODULE				0			0			0
Finalize Soneium attestation architecture	Use Soneium EAS and only a minimal custom contract/resolver if technically required	0	2	1	3	6	4	3	7	5
